

Individual Project Proposal

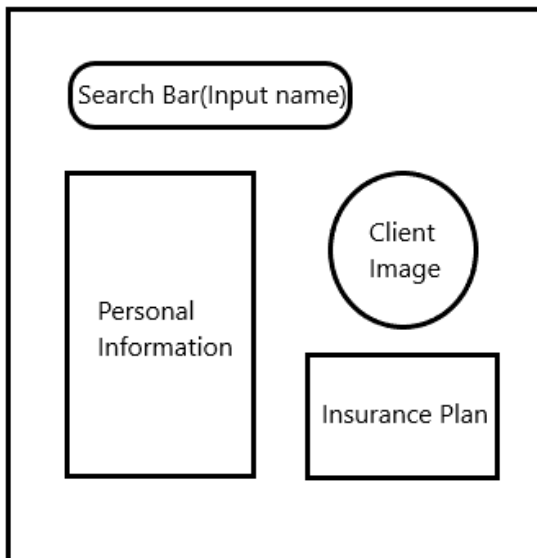

Client Insurance Information Terminal

Problem: This application is aimed to record and access the customer information.

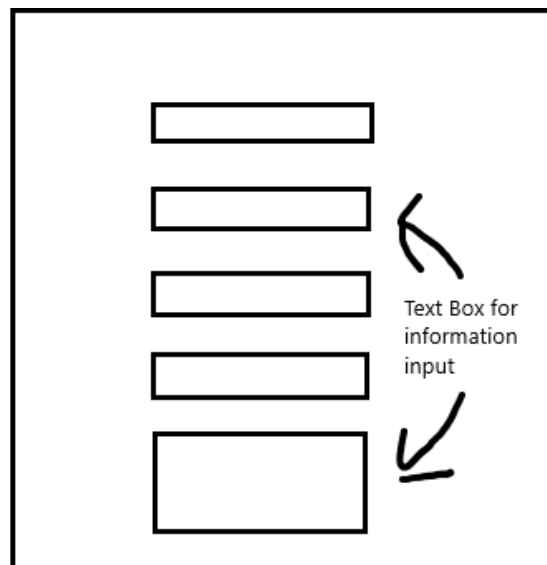

Primary Stakeholder: The Insurance company will be the primary user of the program. Whenever they get a new customer, enter their information (Name, phone number, address etc.). If they need to retrieve the data, simple search the customer name from the app.

User Interface

Search Panel

Information Record Panel

Data

The customer's name, phone number, email address etc. will required to be entered into this application. A binary search tree should be OK for this type of data storage.

The key will be the customer name, and the value will be the detailed information about that specific customer.

For example:

Customer Name: John Doe

Age: xx

Phone Number: 1-xxx-xxx-xxxx

Income: xxxxxxxx

Address: xxxxxxxxxxxx

Insurance Plan: xxxxxxxxxxxx
